Art Unit: 2811

Applicant's request for reconsideration has been considered but does not place the application on condition for allowance because claims 1 and 21 do not specify forming a channel layer by performing implantation before gate electrodes are formed. What the claims explicitly state is "forming a channel region in the exposed portion of the substrate". Channel region is a region between source/drain regions. And this region is explicitly taught by Nara as being formed before the electrodes are formed.
